

ALLPROOF INDUSTRIES PRESENTS

INVISI-DRAIN™

A clever concept in floor drainage

The INVISI-DRAIN eliminates the need for a grate in the bathroom floor or the shower. INVISI-DRAIN forms an edge to the surrounding floor tiles, leaving a gap for water to flow through, making the drain virtually INVISIBLE!

INVISI-DRAIN - Easy to Install

- The INVISI-DRAIN uses an ALLPROOF LEAK CONTROL FLANGE which is recessed into the substrate and accepts the sub tile waterproofing membrane.
- A CONSTRUCTION CAP is provided to protect the drain during construction; this must be removed before installation of tile frame.
- The TILE FRAME provides an edge to finish tiles to. The tiles should be flush with the edge of the frame. The frame can be raised to suit different tile heights using the supplied PVC spigot, which is cut to length.
- The REMOVABLE TILE INSERT TRAY uses a matching tile which is cut to size and laid inside the tray so only the edge of the tray is visible. The insert tray can be removed at any time for access.

INVISI-DRAIN comes complete with

- ALLPROOF Leak Control Flange
- TILE FRAME with height adjustable spigot
- REMOVABLE TILE INSERT TRAY to lay tile into
- CONSTRUCTION CAP to protect the drain during construction
- PLASTIC or CHROME plated finish
