

METAL COLLECTION MAINTENANCE GUIDE

Allproof supplies a range of electroplated finishes on selected products. These finishes may require regular maintenance to keep their aesthetic appearance.

Allproof would like to clarify that the electroplated finish available on our grates is for aesthetic purposes only, any damage to this layer does not effect the performance of the product in any way.

Allproof metal collection finishes are applied to stainless steel products using a thin layer of Electroplated metal. This layer will react as per the characteristics of the metal finish used, therefore some oxidisation and tarnishing may occur. We recommend regular cleaning of these products to avoid any unwanted tarnishing and maintain a desired finish.

Please see below for guidance on individual finishes, on all of these it is strongly advised that a soft cloth and non-abrasive cleaning agents are used so not to scratch or remove the finished surface.

Antique finishes: Regularly wash with hot soapy (dish washing liquid) water, once dry an automotive wax can be applied if desired to improve the longevity of the finish regarding tarnish.

Gold: Hot soapy (dish washing liquid) water.

Brass & Copper: Can be cleaned with an all purpose liquid cream polish as per suppliers guidelines. Products containing a light wax such as shaving foam can be applied once clean to provide a temporary barrier to reduce any oxidisation and tarnishing that occurs.

Allproof would like to advise that this finish is the same as other bathroom fittings (i.e. tapware) and encourage a similar level of care to cleaning schedules and process.
