

POWDER COATED MAINTENANCE GUIDE

Allproof supplies a range of products that have been powder coated, this finish may require regular maintenance to keep its aesthetic appearance.

Allproof would like to clarify that the powder coated finish supplied on a selection of our products is for aesthetic purposes only, any damage to this layer does not effect the performance of the product in any way.

We recommend regular cleaning of these products to avoid build up of contaminants that may degrade the quality of the powder coated finish (i.e. hard water deposits, salt, loose debris).

We recommend care is taken during the installation and use of these products to retain optimum appearance, the powder coated layer can be susceptible to marking, scratching and/or chipping if not cared for correctly.

Cleaning:

- > Remove any attached debris with a soft wet sponge to avoid scratching.
- > Wash down products with a soft brush and/or cloth using standard household detergent mixed in warm water.
- > Thoroughly rinse with fresh water to remove any remaining detergent.

Do Not:

- > Use aggressive solvent cleaners such as thinners or petrol.
- > Use abrasive products such as steel wool, scrapers, scouring liquids or powders.

Allproof would like to advise that this finish is the same as other bathroom fittings (i.e. tapware) and encourage a similar approach to care and maintenance.
